

Spotter Scout

Spotter Core

Spotter Scout has the same wave, weather, and ocean sensing core as a Spotter buoy but just packaged in a long-endurance, uncrewed vehicle built by Online Oceans.

Bristlemouth Payload Bay

Compatible sensors can be added here for co-located subsurface measurements.

One USV, Two Powerful Platforms

The **Spotter Dashboard** (spotter.sofaroccean.com) is your conduit to ocean insights. Use it to view and download observation data collected by Spotter Scout, configure data modes and sensor alerts, and manage the observation data telemetry settings.

Tether (tether.onlineoceans.com) is your fleet control system. Use it to plan routes and add waypoints, send your Spotter Scout on missions, take manual control of your Spotter Scout, view live video and captured media, and review device health data.

Ready, Set, Launch

- 01 Set up your Spotter Dashboard account and register your Spotter Scout to your account.
- 02 Log in to Tether and plan your first mission.
- 03 Turn on the vehicle by removing the magnetic key.
- 04 Ensure the Spotter core is switched on and communicating with the Dashboard.
- 05 Launch your Spotter Scout and send it on its mission.
- 06 Review the collected data in the Spotter Dashboard.
